

Constant by Macros

- **#define BUFFERSIZE 100**
 - Compile replaces all occurrences of BUFFERSIZE by 100.
 - BUFFERSIZE does not require memory, no type, cannot be used as a variable

- **When should we use it?**
 - When we have some constants that are
 - used in multiple places
 - subject to future changes.

- **Why do we use it?**
 - Easy to understand.
 - Easy to change.

- **Preprocessor directives : lines starts with a hash sign #.**
 - The compiler processes these directives in the preprocessing stage.
